Cookbook for R - Graphs Graphs My book about data visualization in R is available! The book covers many of the same topics as the Graphs and Data Manipulation sections of this website, but it goes into more depth and covers a broader range of techniques. Bar and line graphs (ggplot2) - Cookbook for R In ggplot2, the default is to use `stat_bin`, so that the bar height represents the count of cases. Bar graphs of values. Here is some sample data (derived from the `tips` dataset in the `reshape2` package):. Legends (ggplot2) - Cookbook for R See Axes (ggplot2) for information on how to modify the axis labels. If you use a line graph, you will probably need to use `scale_colour_xxx` and/or `scale_shape_xxx` instead of `scale_fill_xxx`. `colour` maps to the colors of lines and points, while `fill` maps to the color of area fills.

Plotting distributions (ggplot2) - cookbook-r.com Histogram and density plots. The `qplot` function is supposed make the same graphs as `ggplot`, but with a simpler syntax. However, in practice, itâ€™s often easier to just use `ggplot` because the options for `qplot` can be more confusing to use. Axes (ggplot2) - Cookbook for R Setting tick mark labels. For discrete variables, the tick mark labels are taken directly from levels of the factor. However, sometimes the factor levels have short names that arenâ€™t suitable for presentation. Colors (ggplot2) - Cookbook for R Mapping variable values to colors. Instead of changing colors globally, you can map variables to colors â€™ in other words, make the color conditional on a variable, by putting it inside an `aes()` statement.

Quick-R: ggplot2 Graphs - statmethods.net Graphics with ggplot2 The ggplot2 package, created by Hadley Wickham, offers a powerful graphics language for creating elegant and complex plots. Its popularity in the R community has exploded in recent years.
